

# Temperature Sensors

## Information Sheet

Itron temperature sensors are built in highest quality for various applications. A wide selection of direct and pocket installed sensors are a great complement of our thermal energy meters. All temperature sensors are delivered paired, verified by the MID initial calibration. Furthermore, all sensors meet the requirements of DIN EN 1434.

### CHARACTERISTICS

#### » Your benefits

- Highest accuracy  
Smallest measuring errors
- Great response behavior  
Exact instantaneous values
- Different versions  
Always the right solution

#### » Properties

- Temperature sensors Pt 100 and Pt 500
- Paired acc. EN1434
- Standard DIN EN 1434 and AGFW
- CE conform (MID)

#### » Field of applications

- Direct installation and pocket installation
- Temperature measurement in closed-loop pipe systems of building service areas to measure cooling- and heating energy
- Temperature measurement for energy measurements for district heating and cooling

TEMPERATURE SENSORS – OVERVIEW

Direct Installation

## MOUNTING OPTIONS FOR TEMPERATURE SENSORS

### Option 1 – Installation in threaded pipe fitting and ball valve

- » direct installation
- » probe axis perpendicular to axis of fitting and in same plane

### Option 2 – Installation in Bend

- » direct installation
- » pocket installation
- » probe axis coincident with pipe axis

### Option 3 – Installation in angled probe

- » direct installation
- » pocket installation
- » temperature sensing element inserted to pipe axis or beyond

### Option 4 – Installation in perpendicular probe

- » direct installation
- » pocket installation
- » probe axis perpendicular to pipe axis and in the same plane

## RECOMMENDATIONS FOR INSTALLATION OF THE TEMPERATURE SENSORS

- » Temperature sensors for thermal energy applications are paired according to EN1434 accuracy requirements. In case of change the complete pair must be changed.
- » One temperature sensor should be installed near to the outlet of the flow meter. Flow meters DN15 and 20 offer a measuring point directly integrated in the flow meter (downstream position).
- » Both supply and return temperature sensors should be installed in a similar way to ensure symmetric measurement and therefore best accuracy. Don't mix direct installation with installation in pockets.
- » In 2-wire measurement the connection cable of both temperature probes must have the same cable length (same wire resistance).
- » When laying the cables a minimum distance of 50 mm to main power cables and/or sources of electromagnetic interferences should be respected.
- » In case of strong sources for electromagnetic disturbances (e.g. high power machines and pumps, frequency and power converters, power switches, neon tubes) it's recommended to increase the minimum distance to meter signal cables to 50 cm.
- » To achieve highest accuracy, the tip of the probes/pockets should reach the center of the pipe.

### HEATING APPLICATION

#### > Temperature sensors installation best practices for Heating application

- Sensor pockets and connected sleeves must be installed head upwards.

### COOLING APPLICATION

#### > Temperature sensors installation best practices for Cooling and Combined applications

- To prevent water condensation, sensor pockets and connected sleeves must be installed head downwards.
- To prevent rusted terminals, head temperature sensors should be potted with resin.
- Never use oil or grease to lubricate pockets. Use silicon instead.

Itron is a global technology company. We build solutions that help utilities measure, manage and analyze energy and water. Our broad product portfolio includes electricity, gas, water and thermal energy measurement and control technology; communications systems; software; and professional services. With thousands of employees supporting nearly 8,000 utilities in more than 100 countries, Itron empowers utilities to responsibly and efficiently manage energy and water resources. Join us in creating a more resourceful world; start here: [www.itron.com](http://www.itron.com)
